ADITYA KADLABAL SRIPAD

Boston, MA 02119 | +1 (857) 376-7415 | adityasripad3111@gmail.com | LinkedIn

EDUCATION

Northeastern University ***Boston, MA | Sep 2024 – Dec 2026***

Master of Science in Engineering Management, GPA: 3.71

Coursework: Supply Chain Engineering, Lean Concepts and Applications, Engineering Project Management, Deterministic Operations Research

R.V. College of Engineering ***Bengaluru, India | Aug 2019 – Aug 2023***

Bachelor of Engineering in Industrial Engineering and Management

Academic Awards: Second Best Project Award (Senior Project), First Best Project Award (Library Redesign)

TECHNICAL SKILLS

Supply Chain & Forecasting: MRP, FEFO/FIFO Inventory Logic, Demand Forecasting (WMA, Exponential Smoothing, ETS, ARIMA, SARIMA, Holt-Winters Damped), Waste Analysis, EOQ

Process & Quality: Value Stream Mapping, 5S, Kaizen, A3 Problem-Solving, Root Cause Analysis

Inventory & Logistics: Cold Chain Management, Lot Tracking, Vehicle Routing, Shipment Consolidation

Simulation & Design: FlexSim, ANSYS Workbench, SolidWorks, Miro

Analytics & Programming: Python (pandas, numpy, statsmodels, Plotly, Dash, openpyxl, xlsxwriter), Excel (Advanced), Power BI

PROFESSIONAL EXPERIENCE

Vaxxinova US ***Willmar, MN | Jan 2026 – Aug 2026***

Data Analyst Co-op

- Architected Project Mercury, a **Python/Dash** decision-assist dashboard for demand forecasting, **MRP**, lot tracking, and waste analysis across a portfolio of 22 customer accounts
- Built and validated 7 forecasting models via **MAE/MAPE** scoring on an 18-month train/9-month test split; found no single model reliable enough for direct production planning, redirecting the dashboard toward fill-date tracking, demand-shift analysis, and shipping-gap monitoring as the primary decision tools
- Segmented customer accounts into 5 behavioral categories based on 5 years of ordering history, surfacing rising, declining, and inconsistent-demand accounts to prioritize inventory and account-management decisions
- Analyzed over 1,000 shipments across 30 states and 176 locations, identified redundant delivery patterns and modeled a consolidation approach projected to cut shipments by roughly 10%
- Documented the full manufacturing process, spanning Fermentation, Downstream Processing, and Blending & Bottling, as ISO-standard flow diagrams using Miro during a production floor rotation, presented findings to senior leadership

Greaves Electric Mobility ***Bengaluru, India | Mar 2023 – Jun 2023***

Design Project Intern | Hydraulically Operated Tipper for Electric 3-Wheeler

- Led a 4-member team to design a side-tipper mechanism for electric three-wheelers, applying a **Pugh matrix** for design selection and **ANSYS**-validated CAD modeling to cut operational costs by 5% and improve load-bearing stability by 8%

Nakshatra Agencies ***Bengaluru, India | Apr 2022 – Jul 2022***

Logistics Project Intern | Vehicle Routing for a Distribution Agency

- Developed a vehicle routing optimization model **(Traveling Salesman Problem, Savings Matrix Method, NEXTMV cloud API)** for a distribution network of 12 suppliers and 30 clients, reducing delivery distances by up to 30 km
- Streamlined logistics planning using Excel-based route automation to minimize delays and improve operational efficiency across the distribution network

MTR Foods Pvt. Ltd. (Orkla ASA) ***Bengaluru, India | Sep 2021 – Oct 2021***

Engineering Procurement Intern | Engineering Procurement Process Mapping

- Mapped procurement workflows across Engineering Store, Maintenance, and Purchase teams and recommended ERP integration to address paper-based approval gaps, reducing estimated sourcing delays by 5–7%

ACADEMIC PROJECTS

Multi-Echelon Blood Supply Chain Simulation ***Boston, MA | Sep 2025 – Present***

IE 7200: Supply Chain Engineering (also applied to IE 5400: Healthcare Systems Model Analysis)

- Built a discrete-event simulation **(FlexSim)** of a multi-echelon supply chain, spanning a regional processing center and two distribution points, to evaluate wastage rate and demand satisfaction trade-offs under varying supply and demand levels
- Found that inter-node inventory transshipment reduced wastage and improved demand satisfaction under supply-demand imbalance, while excess supply beyond a capacity threshold increased system-wide wastage due to processing bottlenecks

Lean Process Optimization – Process & Manufacturing ***Boston, MA | May 2025 – Jun 2025***

IE 5617: Lean Concepts and Applications

- Redesigned a procurement process using **VSM** and **5-Why analysis**, cutting lead times by 15%
- Achieved zero errors across 5 stations in a process simulation, coordinating a 5-member team through cross-training and pull-based replenishment

PUBLICATIONS

Chilkuri, K.R., Kadlabal Sripad, A., Martagan, T. "Simulation and Performance Evaluation of a Multi-Echelon Perishable Blood Supply Chain with Inter-Hospital Transshipment." Accepted, Winter Simulation Conference (WSC), Dec 2026.

CERTIFICATIONS & LEADERSHIP

Certifications: LAI Lean Academy® (Northeastern) | Fundamentals of Digital Marketing (IAB Europe)

Course Assistant Grader, IE6300, Northeastern (Sep 2026–Present) | Membership Outreach & Engagement Officer, INFORMS Student Chapter (2026–2027) | Guest Speaker, IE6300 (Oct 2026) | Founder, Agile Flow Sprinter
